Removal - Exterior mirror glass

⚠ WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.

NOTICE: Position the screwdriver using the service slot in the mirror glass backing plate to remove the mirror glass. Prying on the backing plate in other locations may damage the mirror glass.

1. Remove the exterior mirror glass.

1. Position the exterior mirror glass fully in and up.
2. Using a flat blade screwdriver to release the tabs starting at the lower outboard side of mirror and continuing around the mirror until all the tabs are released.
Use the General Equipment: Flat Headed Screw Driver
3. Disconnect the exterior mirror glass electrical connectors.

Care Instructions

Carbon fiber products are durable, but still requires care and maintenance to stay looking good. More specifically, keep the products clean and minimize exposure to the sun. Gloss finish products should be waxed with a car care product designated for clear coat finishes (non-abrasive). Matte finish products should not be waxed, surface may become spotty. Grease or fingerprints may be reduced from matte finish with rubbing alcohol. Do not use high heat to apply wrap, PPF or ceramic coating as the heat may damage the clear finish and/or the resin within the carbon fiber product. Do not drive your vehicle equipped with carbon fiber products through an automated or commercial car wash due to the high-water pressure, high water temperature and unknown soap content. Wash your vehicle by hand with low water pressure, low water temperature and a quality automotive grade Ph neutral soap formulated to minimize scratching and fading (intended for late model clear coat finishes). Do not use a high-pressure wand on carbon fiber surfaces.
